

## Simulator with a separate driver's desk

### Simulator with RBS driver's desk

In 2007, a complete driver's desk was extracted from a RBS Bern-Solothurn driving trailer and was transformed into a simulator for use in exhibitions. Similar desks are used by various railway companies in Switzerland in vehicles of the sixties.

### Use

- For exhibitions (eg Switzerland Transport 07, Die andere Bahnmesse 08, Heso 08),
- For training and exhibitions in the Berne University of Applied Sciences,
- As a reserve training simulator for the RAILplus Simulator Container (the desk is equipped with the complete train protection system ZSL90 interfaces).

### Connection driver's desk - PC

RS232 and PLC,  
frequency converter for tachometer supply
